

Software development life cycle

TOOLS

plan → trello

Design → Figma, Adobe XD

Development → VS code, VS,

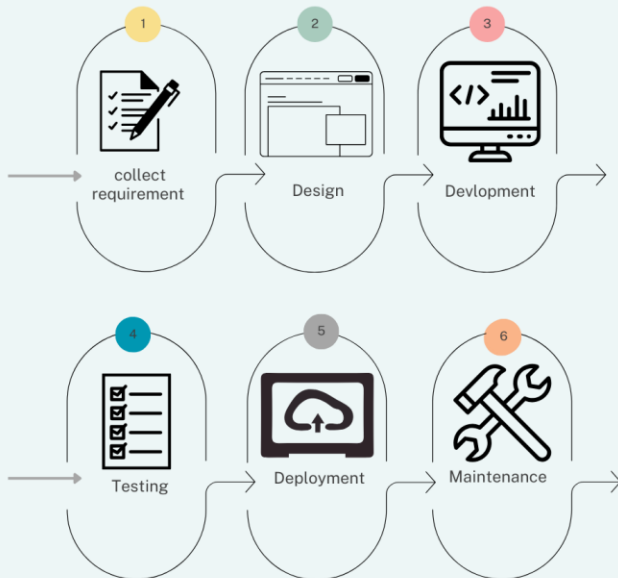

Testing → Postman

Deployment → Azure DevOps

WATERFALL MODEL

AGILE MODEL

Agile VS waterfall

<i>Agile</i>	<i>waterfall</i>
follow a similar sequence yet do so in smaller increments with regular feedback loops	Once a phase is completed, it can be difficult and costly to revisit a previous stage
Faster feedback cycles Identifies problems early Time to market is dramatically improved	Requires less coordination due to clearly defined phases sequential processes
More time	Risk of time waste due to delays and setbacks during phase transitions
